Volkswagen Training Center and Media Utilities Building, Chattanooga TN
This 150,000 square foot building consists of a concrete slab-on-grade, precast concrete columns, and a structural steel roof frame with insulated metal wall panels. Close coordination with Volkswagen equipment suppliers, and also with mechanical, plumbing, electrical, fire protection and all other building contractors happened on a continual basis due to the congestion of this area on the project site. The schedule for this type of project was very aggressive for a building of this size, and was completed in five months.
